

Responding to Climate Change: Opening Worksheet

Preface:

Global Climate Change is real and affects all Life. Humans are causing it by altering the amount of greenhouse gases in our common atmosphere. Greenhouse gases trap heat and make the planet warmer.

Human activities are responsible for almost all of the increase in greenhouse gases in the atmosphere over the last 150 years.

The largest source of greenhouse gas emissions from human activities in the United States is linked to burning fossil fuels for electricity, heat, and transportation. There are viable alternatives to fossil fuels for our energy needs.

The following worksheets are intended to help evaluate today's options and select those that are best for my personal circumstances.

The dinosaurs never saw that asteroid coming. What's our excuse?

--- Neil deGrasse Tyson

Why I care about climate change....

What brought me here today?
